

## Message from the President & CEO

As I travel across the country meeting General Managers, Directors of Golf, Head Pros, Superintendents, members, and committee volunteers I have enjoyed our discussions about TurfHound. Inevitably one question always arises; how did you ever come up with the idea?

As they say, long story short, I broke my club hitting from a “typical” range mat. That was back in 1990 and from that point on; I’ve dedicated myself to finding the finest materials to provide the greatest performance surface for the best practice session for golf enthusiasts!

Our patented Active Foam Technology allows for the most realistic feel underfoot & for club head action through the ball without experiencing shock to the wrist, elbow, or shoulder. The FAQ’s on our website may answer a few questions you might have about the technology behind TurfHound Performance Surfaces. Aside from the dual layer active foam subsurface, TurfHound’s modular system can meet any club or driving range’s budget and allows for adding additional panels to expand the Tee Line and of course to rotate the panels to extend the life of your surface.

Please take a few minutes to view our website and view our photo gallery to get an idea of the many models TurfHound offers.

Enjoy your practice session!
