

Introducing a New Universal Tee System with our Improved Tee Insert Design

While the TurfHound tee system has long been recognized as one of the better options. Every tee system, including ours faces the same dilemma of balance during impact: hold the tee too loosely and it flies out; grip the tee too tightly and it breaks. Thanks to 3D printing technology, we can now design, produce, and test new inserts in days rather than years.

Using a combination of new materials, new production methods and player feedback we have **re-engineered** the core insert for current systems and **re-designed** the protective cover to be universal for all future systems.

TurfHound has always had three objectives:

- Improve the compatibility between traditional wood tee and rubber tee systems.
- Have universal height adjustments for each system.
- Streamline the whole system for future modifications including alignment guides.

Our new universal tee cover and interchangeable inserts advances all three objectives. With insert substitutions, the system accommodates slotted tees, rubber tees, and future accessories.
