

**TURFHOUND INTRODUCES:
NEW HI-PERFORMANCE TEE LINE CONFIGURATION
FITS NEW AND EXISTING 10' CENTER STATIONS**

TURFHOUND IS EXCITED TO INTRODUCE IT'S NEW HIGH PERFORMANCE TEE LINE STATION CONFIGURATION

TurfHound, the No. 1 Performance Synthetic Golf System, is addressing the increased demands and usage of our industry-leading hitting surfaces with the launch of the new 10' station configuration.

FEATURES:

- New configuration is for 10' center tee lines
- Extra wide stance panel
- Proprietary new and improved tee system offers greater tee retention and performance
- Use for irons, metal woods and hybrids
- 16" fairway strips for high use situations offers cost effective replacement solution
- 16" NEW Low rough panel for teeing up metal wood

This new tee 10' center configuration offers the same great natural playing characteristics of our current products, with a more flexible and cost-effective solution for replacement panels at high use driving ranges and on course practice facilities.

We fully recognize the increased demand for practice facilities and the growing trends incorporating technology into driving ranges. The fact is that the volume of balls being struck on driving ranges has gone up significantly. As a result of this rising demand, the sheer volume of usage is pushing synthetic turf products beyond their normal intended usage.

Along with golfers practicing to improve their games, they are enjoying their driving ranges as entertainment centers with the build out of "tech ranges" utilizing launch monitors like Pro Tracer, Trackman, Flight Scope, etc.

To combat this challenge, TurfHound's new configuration with a 40" long-wearing stance panel and both fairway and NEW "Low rough" hitting strips offer a cost-effective real solution to dealing with the increased usage and demand of our synthetic hitting surfaces while maintaining the highest level of quality turf at a good value.

We are proud that more than 1,500 golf facilities in North America have chosen TurfHound because of our realistic playing surfaces.

The launch of our NEW CONFIGURATION provides both our loyal and prospective customers a cost-effective means to give players more long-lasting surfaces that can help them further enhance their golfing experiences while while reducing the long-term cost for the facility.

10' HIGH PERFORMANCE TEE LINE STATION CONFIGURATION
